

HEMORRHOIDS

Start Living a More Comfortable Life

Hemorrhoids are very common, occurring in half of all men and women by age 50.

CAUSES of Hemorrhoids

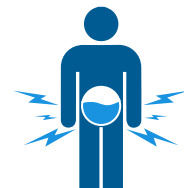

ADVANCED Age

HEAVY Lifting

DIARRHEA

PREGNANCY & CHILDBIRTH

PROLONGED Sitting

CONSTIPATION & STRAINING

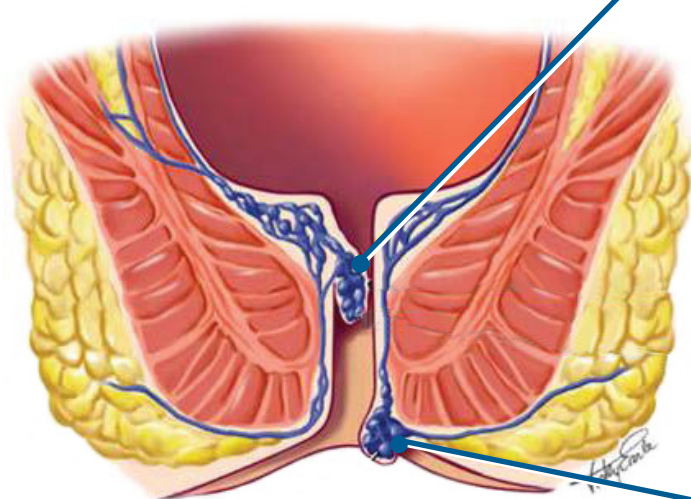

COMMON SYMPTOMS of Hemorrhoids

- ✓ Rectal bleeding
- ✓ Anal pain
- ✓ Anal and rectal itching
- ✓ Feeling of rectal fullness
- ✓ Soiling of underwear
- ✓ Bulging tissue from the rectum
- ✓ Difficulty cleaning after a bowel movement

TYPES of Hemorrhoids

INTERNAL

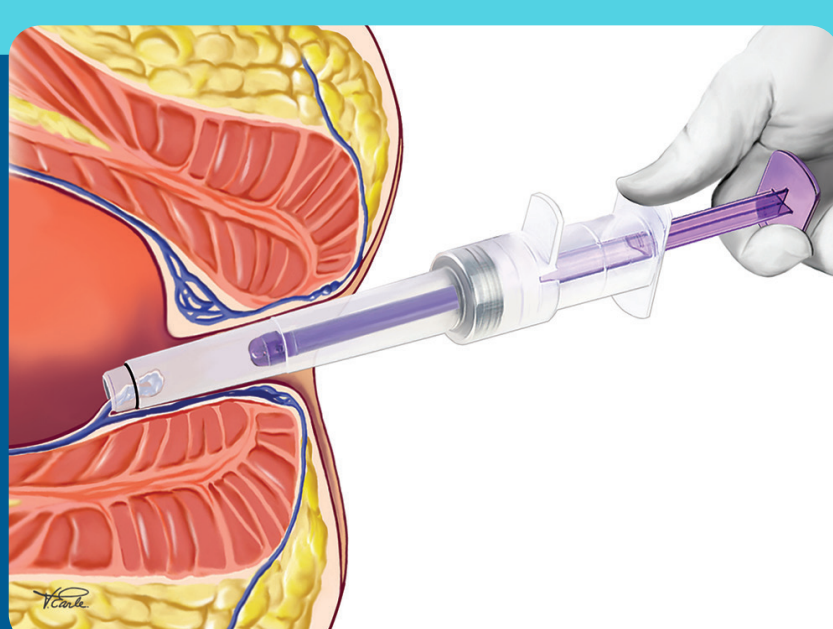

These are not visible outside the body, but they can be felt. They are less painful than external hemorrhoids and may be felt as an internal itching or feeling of fullness after a bowel movement. Banding is an effective treatment for these.

EXTERNAL

These visible lumps or bulges around the anus are more painful and sensitive than internal hemorrhoids. They usually go away on their own with minimal treatment. Banding is not an option for external hemorrhoids.

Hemorrhoid BANDING TREATMENT

Our banding treatment works for most patients suffering with internal hemorrhoids. We use gentle suction to grasp the hemorrhoid rather than metal toothed forceps, making it a more comfortable procedure. The banded tissue falls off in 2-3 days. Meanwhile, patients can go about their normal activities.
